

EduPath AI Enquiry Assistant

Architecture & Workflow — QuAnHack Internship Final Round

Project Overview

EduPath is an AI-powered enquiry assistant for training academies. It handles student queries, recommends courses, captures and scores leads, and automates follow-up — simulating a real WhatsApp Business workflow. Built with Streamlit, Groq LLaMA 3.1, and Python.

Workflow (Input → Process → Output)

Key Features & Capabilities

Intents Handled	Smart Features	Admin & Deployment
Course Enquiry — Fees, duration, batch dates, eligibility	Memory — Last 10 messages sent as context	Dashboard — Live table, cards, pie chart analytics
Recommendation — Goal-based with one clarifying question	Lead Scoring — Hot / Warm / Cold auto-classification	CSV Export — One-click download of all leads
Comparison — Side-by-side table of two courses	Validation — Name, phone, email, duplicate check	WhatsApp API — Production: Twilio / 360dialog webhook
Enrollment — Triggers inline validated lead form	Multilingual — Full English + Malayalam support	Firestore Ready — CSV swappable with Firestore for scale
FAQ — Placement, EMI, certificate, refund	Follow-up Preview — Simulated WhatsApp + Email shown	Streamlit Cloud — Hosted publicly, zero infra cost

Tech Stack

Layer	Technology	Purpose
AI / LLM	Groq — LLaMA 3.1 8B	Natural language understanding & generation

Frontend	Streamlit	Chat UI, admin dashboard, language toggle
Backend	Python 3.10+	Business logic, session state, validation
Data	Pandas + CSV	Lead storage (Firestore-ready for production)
Charts	Plotly	Pie chart — lead quality distribution
Messaging	WhatsApp Business API	Production: Twilio / 360dialog webhook
Hosting	Streamlit Community Cloud	Free public deployment via GitHub
Version Control	GitHub	Source code + README + architecture
